Comparing Distributions refers to the statistical data analysis that encompasses the traditional goodness-of-fit testing. Whereas the latter includes only formal statistical hypothesis tests for the one-sample and the K-sample problems, this book presents a more general and informative treatment by also considering graphical and estimation methods. A procedure is said to be informative when it ...

Comparing Distributions: Z Test ... The Z-test is especially useful in the case of time series data where you might want to assess a "before and after" comparison of some system to see if there has been effect. One relevant example (which you will do on the second assignment) is to determine whether or not "grade inflation" is real and ...

As a non-parametric test, the KS test can be applied to compare any two distributions regardless of whether you assume normal or uniform. In practice, the KS test is extremely useful because it is efficient and effective at distinguishing a sample from another sample, or a theoretical distribution such as a normal or uniform distribution.

Note that the distribution of the first population has one parameter. Let  $q$  be the probability that a randomly-chosen member of the second population is in category #1. Note that the distribution of the second population also has one parameter. To compare the distributions of the two populations, we construct two different models.

The comparative CDF plot shows the empirical distributions. The horizontal axis indicates the range of the data: [0, 11] for the Gamma variable, [-3,3] for the Normal variable, and [-0.5, 0.5] for the Uniform variable. However, the plot is far from perfect.

for an example. We can theoretically show that if  $F_1$  is the empirical distribution of  $x$  and  $F_2$  is the true distribution  $x$  was drawn from, then  $\lim_{n \rightarrow \infty} D_n = 0$ . Similarly, if the two distributions have no overlap at all, the maximum difference will be 1 (when one CDF is 1 and the other is 0). Therefore, we can test distribution equality by comparing ...
