Mediterranean land degradation threatens food security. Climate change, tourism and population growth are all accelerating land degradation in the Mediterranean region, according to recent research. This can have severe impacts: the amount of available agricultural land per capita in the region could have dropped by half by 2020, compared with 1961, the study estimates. .

Mediterranean land degradation threatens food security

The degradation of soil ability for carbon sequestration due to land use and management is a general problem that is especially significant in Mediterranean environments. The scarcity of organic matter in soil in environments such as the South of Europe is of great concern.

Mediterranean Information Office for Environment, Culture ...

Extensive forest fires throughout the Mediterranean in the early 1990s, which resulted in extensive soil erosion, runoff, and flooding, had a major impact on the public perception of land degradation. As a result, there has been a renewed emphasis on national programs of abatement in numerous Mediterranean countries.

Until the early seventies land degradation and desertification were not considered a major issue in most Mediterranean regions. Traditional agricultural systems were believed to be able to keep those processes in check. Thus low priority was assigned to research programmes and projects on soil erosion and conservation, preference being given to the impact of farm machinery on soil structure and compaction along with the role of organic matter in the soil.

Land degradation control and its global environmental ...

Land degradation is a natural or human-induced process (Figure 1) that negatively affects the land to function effectively within an environmental system and can be defined as a process of degrading land from a former state. Land degradation is closely related to sensitivity, resilience, and carrying capacity of land, as well as to vulnerability of people living on and from these lands.
